

2023 Workshop Program

Canadian Bioinformatics Workshop Series

REGISTRATION AWARDS AVAILABLE

Introduction to R

Date

June 26-27, 2023 - Toronto, Ontario, Canada

Faculty

Frances Wong

Course Objectives

R is one of the most important scripting languages for both experimental and computational biologists. It is well-designed, efficient, widely adopted and has a very large base of contributors who add new functionality for all modern aspects of data analysis and visualization. Moreover, it is free and open source. However, R's great power and expressiveness can at first be difficult to approach without guidance, especially for those who are new to programming. This workshop introduces the essential ideas and tools of R. Although this workshop will cover running statistical tests in R, it does not cover statistical concepts.

Participants will gain practical experience and skills to be able to meet the challenges of data handling, break down problems into structured parts, and use R syntax, functions, and packages.
